I'm opposed to HR4026. I feel that the bill restricts competition. RDS is now available to regular local radio stations and was 15 years ago. Why have they not taken up this service to further competition against possible other better systems like satellite radio. Because again they do not want to allow competition from other regular radio stations by passing the customer along when reaching the out limits of the broadcast area. Restricting again the competitive world. Will not it's time for them to stand on their own two feet and not use the public broadcasting system to club us over the head. Thanks and please do not pass HR 4026
